

Markdown template

This is a Markdown template created by DIME Analytics. It is meant to be a reference to show how text formatting in Markdown is combined with R code to produce R Markdown documents.

Markdown

Headers

This is a header

Subheader 1

Subheader 2

Subheader 3

Paragraphs

This is a line of text. This is another line in the same paragraph.

New paragraphs are separated by two line breaks.

Text emphasis

Text in italics goes between *asterisks* or *underscores*.

Text in bold goes between **two asterisks** or **two underscores**.

You can combine asterisks and underscores to **emphasize with italics and bold** *at the same time*.

Strikethrough text ~~uses two tildes~~.

Lists

Ordered lists:

1. Include a number and a dot before every item
2. Also remember to include a blank line before the beginning of the list
3. The actual number does not matter, the item will have the correct order number

Unordered lists:

- You can use an asterisk
- Or a plus symbol
- Or a minus symbol

Links

Include the link text in brackets followed by the URL in parentheses. Like this:

This is the WB website and this is the course repository.

Tables

Use vertical lines to separate columns and at least three dashes to separate column headers.

This is column 1	This is column 2
Row 1	Row 1
Row 2	Row 2

The width of the cells can vary in the markdown text and the output will look the same.

This is column 1	This is column 2
Row 1	Row 1
Row 2	Row 2
